D. I. H. Derby, Reilly Lab.**INDIANAPOLIS****P. C. Reilly****May. 20, 1933****VILLAGE OF ST. LOUIS PARK WATER SUPPLY**

Please note attached letter from Mr. Rademacher describing the different grades of water obtainable at our St. Louis Park plant. Equally important you will observe the pump of the Village of St. Louis Park is expected to start pumping again. Possibly we should tell our people to commence pumping immediately so as to keep the water from our section getting into the water which is pumped by the Village.

Please let me know about this by return mail.

R.S**Yours very truly,****REPUBLIC CRYOSOTING COMPANY****President.****Enc.****302966**

May 18, 1933.

TO: Mr. P. C. Reilly, President - Indianapolis

FROM: R. L. Rademacher

SUBJECT: VILLAGE OF ST. LOUIS PARK WATER SUPPLY

Please refer to your letter of May 16th. My letter of May 16th crossed yours in the mail. The sample referred to in my letter is from our well before it was recently cased. This water supply from which we were drawing was sometimes referred to as surface water although it came from a depth of 65 feet. You therefore now have samples of our surface water (sample sent you May 16th), our deep well water (sample sent you May 10th) and our swamp water, which we are sending you today. The swamp water which we sampled is off our property. There was a swamp in the northwest part of our property but it was filled in some years ago when additional tie storage space was laid out. The swamp which we sampled is just off our property but adjacent thereto. This is immediately northwest of our property.

It is a shallow swamp, about 6" to 12" deep and covering an area about 200 feet by 350 feet. There is considerable decayed vegetable matter in the water.

The Village of St. Louis Park are not running their pump because it is now dismantled. I have been told that they expect in a few days to start pumping again and as soon as they do a sample will be forwarded to you.

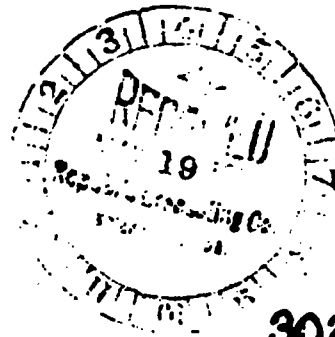

Yours very truly,

REPUBLIC CREOSOTING COMPANY
